(54) COMMUNICATION SYSTEM

(57)Abstract:

PURPOSE: To attain the discrimination of the execution of a requirement and to classify the requirement by accumulating the attribute data of a user to the recording medium of a terminal equipment and allowing an information center to acquire the attribute data of lots of unspecified users via a communication channel.

CONSTITUTION: Attribute data such as age and occupation of users are accumulated in storage media 17, 34 provided respectively with a terminal equipment 12 and an external storage medium terminal equipment 25. When the requirement of data transmission/reception is given from the devices 12, 25 to an information center 1, the information center 1 acquires user attribute data 24, 35 stored in the terminal equipment via a communication network 11. Thus, even when lots of unspecified users use a terminal equipment and requirement data transmission/reception of data to the information center, the requirement execution and requirement classification using the user attribute data are attained.
